

SassaNews syndicates Google News Search results

2004-01-11 21:54:36 by kevin

SassaNews is a FREE PHP-based tool for adding syndicated Google News headlines to your site. It was designed to work with PHP-based content management systems (e.g. phpNuke), but could be used with other RSS tools as well. SassaNews saves searches on your server to minimize bandwidth-using searches. It searches on demand / does not require scheduled (e.g. CRON) jobs and uses a security key to block bandwidth-stealing access by other servers. Our first open-source download is available in the [downloads](#) section.
